Range Towers

Range Towers provides an unobsructed long distance view for many different facility types including correctional facilities and military posts. They can be used for general guard purposes and to spot fire issues in an area. Range towers can be manufactured from our panelized wall system, or welded steel, and they can be upgraded to offer ballistic protection.

These structures are designed, engineered, and manufactured with the added quality control, cost savings and time advantage of modular construction.

SOUTHWESTSOLUTIONSGROUP

Normal security booths cannot always cover a large area when it comes to observation and security. Whether you call it a guard tower, vision tower, range tower or observation platform, a raised structure providing an unobstructed long-distance view can replace a flat security building for more applications. These structures are designed, engineered, and manufactured with the added quality control, cost savings and time advantage of modular construction.

Modular Towers

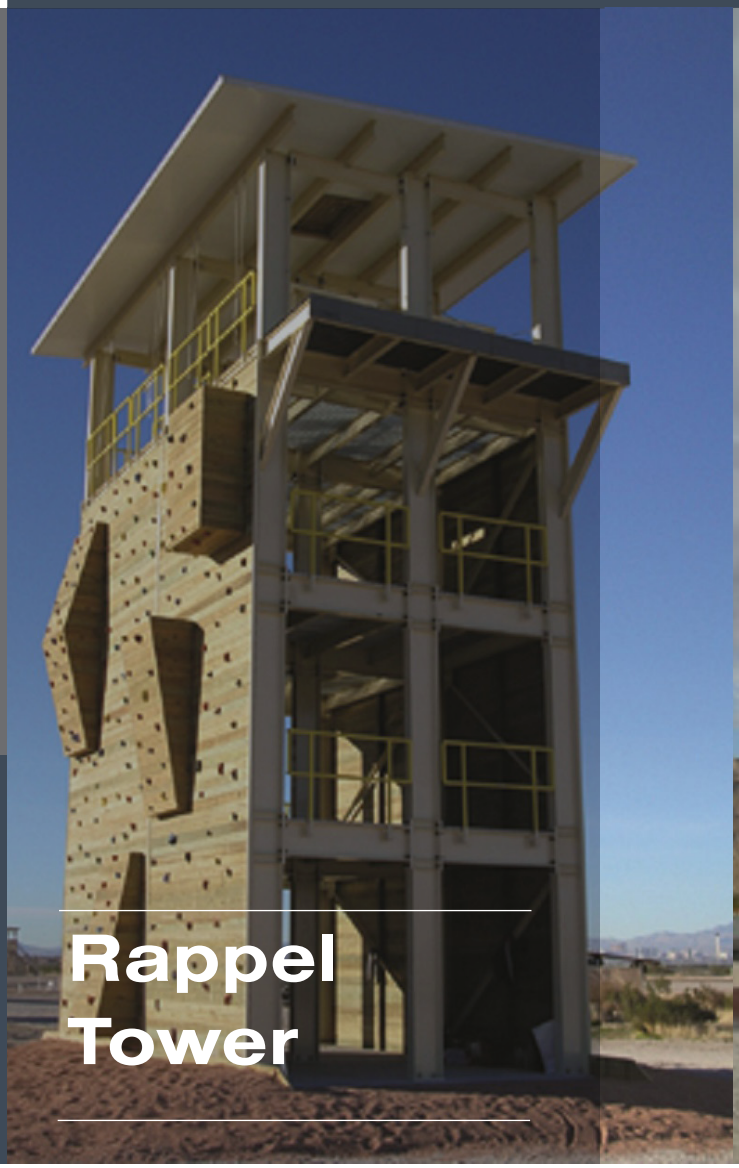

- Powder Coated or galvinazed steel
- Custom stair systems
- Wide selection of finishes and accessories
- Insulated walls and roof with HVAC systems
- Heights to meet your specific needs

Standard Options:

- 26 gauge textured steel faced panels
- R – 11 poly-styrene insulation in panels
- Powder coated or galvanized diamond plate flooring
- Wall hung package unit HVAC
- 3-0 x 7-0 door with ½ glass
- Picture and/or sliding glass window

Rappel Tower

Rappel Towers are used from training military personnel to general public use for rock climbing or zip lines. In any case, these towers must be safe and sturdy to serve their purpose. Towers are designed to meet IBC regulations and finishes with our powder coat system for extra durability. Towers can be designed with multiple platforms and options of stair systems and cage ladders depending on the specific purpose of the project.
